

TPLO TTA NOT GOOD CHOICES

[tplo tta not good choices](#)

There are no Class I or Class II research studies supporting claims that there is any advantage to TPLO or TTA over other treatment choices. After talking with a TPLO or TTA surgeon, you may have the impression that these surgeries are universally believed to be the best possible treatment choice for all dogs with ligament injuries.

[alternative to dog knee surgery tucker s story](#)

In the summer of 2007 my, then 2 year old, American Bulldog began showing some signs of intermittent discomfort and lameness in his rear leg. We did not worry about it too much at first, as he is a crazy jumping bean of a dog that likes to play rough and run wild in the backyard.

[what if i can not afford ccl surgery dog knee injury](#)

Not all owners can afford the expensive surgery that cranial cruciate ligament (CCL) repair surgery typically requires. There is quite a range in prices depending on what procedure is recommended by your veterinarian for your dog's knee repair and where you live.

[evidence update is surgery really necessary for dogs with](#)

A couple of years ago, I wrote about the question of whether or not surgery was better than medical management for dogs with cranial cruciate ligament (CCL) disease. Here was my conclusion at that time: As is almost always the case, the evidence is not of the highest possible quality or unequivocal, but this does not exempt us from having to draw conclusions and make recommendations to our clients.
